The above chart shows local dialling rules within the 015394 – 015395 – 015396 – 01539 group of area codes.

From 5+5 numbers, local dialling begins with the E digit and all numbers with identical 0SABCD digits are dialled as a 5-digit local call.

For calling other numbers with identical 0SABC digits, whether 5+5 or 4+6, for all of those where the D digit differs, those have to be dialled using the area code and number in full.

From 4+6 numbers, local dialling begins with the D digit, and uses 6 digits. Only numbers with 4+6 format can be called as a local call.

From 4+6 numbers, all numbers where the local number begins with the E digit, i.e. 5+5 format, have to be dialled by using both the area code and the local number.

All number ranges identified as NDO numbers always require the area code and local number to be dialled in full.

(01697) 2xxxxx (01697) 3xxxxx (01697) 4xxxxx (01697) 5xxxxx (01697) 6xxxxx (01697) 7xxxxx (01697) 8xxxxx (01697) 9xxxxx	Brampton "B" 4+6	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	CODE + NUMBER	LOCAL NUMBER (6 digits)

The above chart shows local dialling rules within the 016973 – 016974 – 016977 – 01697 group of area codes, based on how things are actually wired up.

From 5+5 and 5+4 numbers, local dialling begins with the E digit and all numbers with identical 0SABCD digits are dialled as a 5 or 4-digit local call.

For calling other numbers with identical 0SABC digits, whether 5+5, 5+4 or 4+6, for all of those where the D digit differs, those have to be dialled using the area code and number in full.

From 4+6 numbers, local dialling begins with the D digit, and uses 6 digits. Only numbers with 4+6 format can be called as a local call.

From 4+6 numbers, all numbers where the local number begins with the E digit, i.e. 5+5 or 5+4 format, have to be dialled by using both the area code and the local number.

All number ranges identified as NDO numbers always require the area code and local number to be dialled in full.

This clearly shows that 4 and 5-digit local numbers in Brampton use the 016977 area code and that 6-digit local numbers beginning 2, 5, 6, 8 and 9 (but NOT 3, 4, or 7) use the 01697 area code.

National Dialling Only, Inter-Area Dialling and Local-Dialling Rules within the 016973, 016974, 016977 and 01697 area codes.		CALLING TO

The above chart shows local dialling rules within the 016973 – 016974 – 016977 – 01697 group of area codes based on Ofcom's faulty allocation data. Red squares with a question mark break Ofcom's local dialling rules. If the chart were to be believed, two numbers with identical 0SABCD digits can belong to different area codes, with the decision based on the value of the E digit. It apparently says that some 016973 numbers are (016973) X while others are (01697) 3X. It also says some 016977 numbers are (016977) X while others are (01697) 7X. This would also infer that 5+5 and 5+4 numbers (where the local number starts with the E digit) are able to call other numbers with identical 0SABCD digits and do so by beginning dialling with the D digit. This is complete and utter nonsense. In "mixed" code areas the decision as to which area code a number belongs to MUST be made by the D digit. All numbers with identical 0SABCD digits must belong to the same area code. All of those 'red square' numbers marked as 4+6 format must in reality be either 0+10 or 5+5 format. Brampton "C" is 0+10 and Brampton "D" is 5+5 (NOT 4+6) and therefore both belong to Brampton "A" (NOT to Brampton "B"). Brampton "E" is 5+5 (NOT 4+6) and therefore belongs to Wigton (NOT to Brampton "B"). **wj**
